

## CLAIMS

What is claimed is:

1 A notification module for a voice messaging system,  
5 comprising:

an auto dialing calling module adapted to initiate a  
communication with a user at a remote location;

a table associating particular events with a need for  
notification of said user; and

10 a controller to activate said auto dialing calling module to  
notify said user upon satisfaction of a particular event;

wherein said satisfaction of said particular event is  
✓ 15 determined based on a comparison of entries in said table to call related  
information contained in a log.

2. The notification module for a voice messaging system  
according to claim 1, wherein:

said call related information is Caller ID information.

20 3. The notification module for a voice messaging system  
according to claim 1, wherein:

said particular events include a occurrence of a  
predetermined number of telephone calls from a particular caller.

25 4. The notification module for a voice messaging system  
according to claim 3, wherein:

said predetermined number of telephone calls of said event  
are within a predetermined range of time.

5. The notification module for a voice messaging system according to claim 1, wherein:

said particular events include a predetermined number of telephone calls from any party within a predetermined range of time.

5

6. The notification module for a voice messaging system according to claim 1, further comprising:

a notification message to be communicated to said remote user.

10

7. The notification module for a voice messaging system according to claim 6, wherein:

said notification message is an audible message.

15

8. The notification module for a voice messaging system according to claim 6, wherein:

said notification message is a textual message.

20

9. The notification module for a voice messaging system according to claim 1, further comprising:

a remote notification designation identifying a communication address of said remote user.

25

10. The notification module for a voice messaging system according to claim 9, wherein:

said communication address is a telephone number of said remote user.

11. The notification module for a voice messaging system according to claim 10, wherein:

said communication is provided by establishment of a telephone call.

5

12. The notification module for a voice messaging system according to claim 10, wherein:

said communication includes transmission of information over the Internet.

10

13. The notification module for a voice messaging system according to claim 10, wherein:

said communication is an email message.

15

14. The notification module for a voice messaging system according to claim 10, wherein:

said voice messaging system is a telephone answering device.

20

15. The notification module for a voice messaging system according to claim 1, further comprising:

a call related information detector/receiver to detect and receive call relating information regarding incoming telephone calls.

25

16. A method for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls, comprising:

5 logging call related information as it is received by said voice messaging system;

reviewing said logged call related information for satisfaction of a predetermined event based on said logged call related information; and

10 notifying a remote user with a notification message in response to satisfaction of said predetermined event.

17. The method for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls according to claim 16, wherein:

said remote user is notified by the establishment of a telephone call from said voice message system.

20 18. The method for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls according to claim 16, wherein:

25 said remote user is notified with an audible notification message.

19. The method for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls according to claim 16, wherein:

5                   said remote user is notified with a textual notification message.

20. The method for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls according to claim 16, wherein:

                  said textual notification message is an email message.

21. The method for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls according to claim 16, wherein:

                  said call related information is Caller ID information.

22. The method for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls according to claim 16, wherein:

                  said voice messaging system is a telephone answering device.

054090" E2452E60

23. Apparatus for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls, comprising:

5 means for logging call related information as it is received by said voice messaging system;

means for reviewing said logged call related information for satisfaction of a predetermined event based on said logged call related information; and

10 means for notifying a remote user with a notification message in response to satisfaction of said predetermined event.

24. A telephone answering device comprising:

a controller;

15 a voice recorder/playback module; and

a calling module activated by receipt of predetermined call related information, said calling module being adapted to initiate a telephone call to a predetermined notification telephone number upon satisfaction of a predetermined event based on received call related information.

25. The telephone answering device according to claim 24, wherein:

said calling module is further adapted to provide a notification message to a party answering said predetermined notification telephone number.
